

Simple meetings with Microsoft® Live Meeting

Web collaboration can radically change the way your company gets business done. Now anyone with a PC and an Internet connection can engage in a live interactive web-based presentation or work session. Microsoft® Live Meeting, is the web conferencing solution that companies rely on when collaborating on a project or engaging an audience really matters.

Integrated Audio and Visual services:

In order to create a successful online presentation or session, the audio and visual capabilities need to work seamlessly. Live Meeting is a completely integrated solution with a single help line and a single bill. Depending upon need, Live Meeting can scale to the number of desired participants, from 2 to 125.

Worry-free reliability and security

To ensure that your web meetings are error-free, you are provided with redundant systems in various locations to prevent network failure. Live Meeting also automatically senses firewall configurations and selects optimum communication performance for that configuration. All participants need is a computer with a good Internet connection and a phone for a worry-free presentation.

Live Meeting always uses proven measures to protect your meetings. For example, content is framed in a way that allows the presenter to keep sensitive material out of the viewing window.

Live Meeting benefits include

Better productivity. Accomplish more by making compelling presentations without travel costs.

Content sharing and creation. Show visuals of any type, including presentations, commonly used document types such as Microsoft Word, Excel, PowerPoint, other applications and web pages, to remote participants in real-time.

Substantial savings. Realise greater return on investment through an affordable communications solution.

Recording functionality. Audio and visuals are recorded simultaneously so no one misses out if they were unavailable at the time of the call.

Live Meeting – for smaller audiences – on demand

Ideal for impromptu working sessions as well as presentations to a small-to-medium-sized group. It allows you to:

- Add visuals to your Automated Audio call.
- Choose on-demand access or advance scheduling.
- Share files.
- Sketch ideas on community white boards.
- View web content together.
- Use one-click recording.
- Integrate Microsoft® Outlook.
